

Practice & Exploration

Hands-on activities to work through genetics concepts

These activities are designed to be worked through actively — alone, in pairs, or in class. Each one targets a concept from the textbook and gives you a chance to *do* genetics, not just read about it. Click any card to open the PDF.

Foundations of Inheritance & Cell Division

DNA Replication

Mutation

Inheritance Patterns

Population Genetics

i More activities coming soon

Additional activities — including Nucleotides, Translation, Ploidy, and Epigenetics — will be added as they're finalized.
